# Solubility is the Key to Trouble Free Operation

## The Concept of EcoSafe® Revive

- Shift polarity of the hydrocarbon base oil
- Regenerate phenolics
- Regenerate aminics
- Re-solubilize varnish

## Benefits

- Improves lubricity of the fluid
- Reduces soft particle contamination by ISO 4406:1999
- Reduces pentane insolubles
- Reduces Membrane Patch Colorimetry results

## Features

**EcoSafe® Revive** is 100% soluble and compatible with all major commercial hydrocarbon-based turbine fluids. Adding 10%

**EcoSafe® Revive** requires no conversion process and reduces the reliance upon expensive varnish removal, abatement and remediation techniques.

Because the combination of anti-oxidants is altered by the addition of **EcoSafe® Revive**, ruler testing must be recalibrated to the new anti-oxidant combustion.

**EcoSafe® Revive** is fully compatible with **EcoSafe® TF-25**. For those users who appreciate the benefits of running with significantly reduced varnish potential while retaining a hydrocarbon-based turbine fluid, the use of **EcoSafe® Revive** is just one small step towards the full benefits of operating in the varnish-free environment offered by **EcoSafe® TF-25**.
